question

Coders here is a simple task for you, you have given an array of size N and an integer M .

Your task is to calculate the *difference between maximum sum and minimum sum of $N-M$ elements* of the given array.

Constraints:

$$1 \leq t \leq 10$$

$$1 \leq n \leq 1000$$

$$1 \leq a[i] \leq 1000$$

Input:

First line contains an integer T denoting the number of testcases.

First line of every testcase contains two integer N and M .

Next line contains N space separated integers denoting the elements of array

Output:

For every test case print your answer in new line

You are given an array of n integer numbers $a_1, a_2, \dots, a_n$. Calculate the number of pair of indices (i, j) such that $1 \leq i < j \leq n$ and $a_i \text{ xor } a_j = 0$.

Input format

- First line: n denoting the number of array elements
- Second line: n space separated integers $a_1, a_2, \dots, a_n$.

Output format

Output the required number of pairs.

Constraints

$$1 \leq n \leq 10^6$$

$$1 \leq a_i \leq 10^9$$
